## **DETAILED ACTION**

### ***Claim Objections***

Claim 1 is objected to because of the following informalities:

With regard to claim 1 (line 5), the word “fist” should be changed to the word --first--.

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Inoue (US 6,590,858 B2).

As per claim 1, Inoue (US 6,590,858 B2) discloses a disk cartridge (10), comprising: a cartridge body (12) including a lower shell (15) having formed therein a first opening (25) for write and/or read and an upper shell (13) butt-joined to the lower shell (15); a rotation wheel (14) housed rotatably in the cartridge body (12) and which houses a disk (11) and has formed therein a second opening (42) corresponding to the first opening (25) and through which the housed disk (11) is exposed to outside; and a shutter mechanism (18) provided between the lower shell (15) and rotation wheel (14) - see Figure 1 - and including a pair of shutter plates

Art Unit: 2627

(18a, 18b) which are pivoted in conjunction with the rotation of the rotation wheel (14) - cf. Figures 2 and 3 - and which uncovers the first (25) and second (42) openings when the latter coincide with each other - see Figure 3 - , the rotation wheel having formed therein an engagement recess (hole 49) in which at least one of the shutter plates (18a, 18b) is engaged.

As per claim 2, wherein the rotation wheel (14) has formed therein a to-be-operated member (e.g., including (43)/(44)) in which a shutter releasing member (32) of the disk recorder and/or player is engaged.

As per claim 3, further comprising a forcing member (e.g., the structure which causes the shutter plates (18a, 18b) to cover the opening (42)) engaged at one end thereof on the cartridge body (12) while being engaged at the other end on the rotation wheel (14) and which forces the rotation wheel (14) in a direction in which the shutter mechanism (14) will cover the second opening (42).
